Reader Response 2
Peregrine, Chapters 3 and 4

Abstract: The introductory abstract should provide a general summary of the chapter or chapters as a whole. The primary theme, and sub-themes or topics should be the principal point of departure for the introductory statement. From this, the reader should derive a general sense of what content is conveyed within the readings under consideration.

Example: “In this chapter, the author reviews the three principal types of data and measurements employed by archaeologists in their sampling and analysis, and he in turn illustrates how nominal, ordinal, and interval data serve to reinforce the validity and reliability of archaeological interpretations.”

Summary: The summary or review sections of your paper should provide sufficient details and examples of terminology employed by the author so as to provide your professor with a point of departure for evaluating whether or not you fully understood the readings under review. This section should avoid the use of quotations from those chapters assigned for review, and as such, this section should reflect your writing and understanding of the readings as articulated in your own words.

Peregrine, Peter N. 2001. Archaeological Research: A Brief Introduction, 1/e. Upper Saddle River, New Jersey: Prentice Hall.

Word Doc File Name: sbs324sF03RR2Mendoza

Comment: The specific upper or lower division section in which you are enrolled should be specified. This makes a difference as to where I record your grades.

Comment: Please cite the actual date of submission of your deliverable.

Comment: Please specify the Reader Response or Lab Deliverable number; and the Author's last name, and the specific chapters reviews in this section.

Comment: The Abstract should begin your narrative and review or lab description. Begin with a summary of what the paper will address.

Comment: Your summary should constitute no less than two double-spaced pages of text (not including Bibliography or References Cited section. Page margins should be 1" at right, and bottom, and 1 1/2" on the top and left margins.

Comment: All sections of the paper should include subheadings that serve to define what it is that the section is targeted to achieve. Examples include "Introduction," "Chapter 3 Summary," "Chapter 4 Summary," and "References Cited."

Comment: Authors Last, First, and Middle names. If multiple authors, then first author is cited in this format, and all others are cited by First, Middle, and Last name.

Comment: Year of Publication.

Comment: Chapter and Book titles. Page numbers should be cited as well.

Comment: Publisher information in this format.

Comment: Sbs324s = Course number specific to your actual enrollment. This constitutes the "required" Word document file name for assignments emailed to your professor.

Comment: F03 = Term and year (e.g., Fall 2003)

Comment: RR2 = Reader Response 2 or corresponding Lab Deliverable number.

Comment: Mendoza = Student last name.
